

The next generation in security

Supplied, installed
and commissioned
from just £7 per day

Grade 2 Insurance Approved

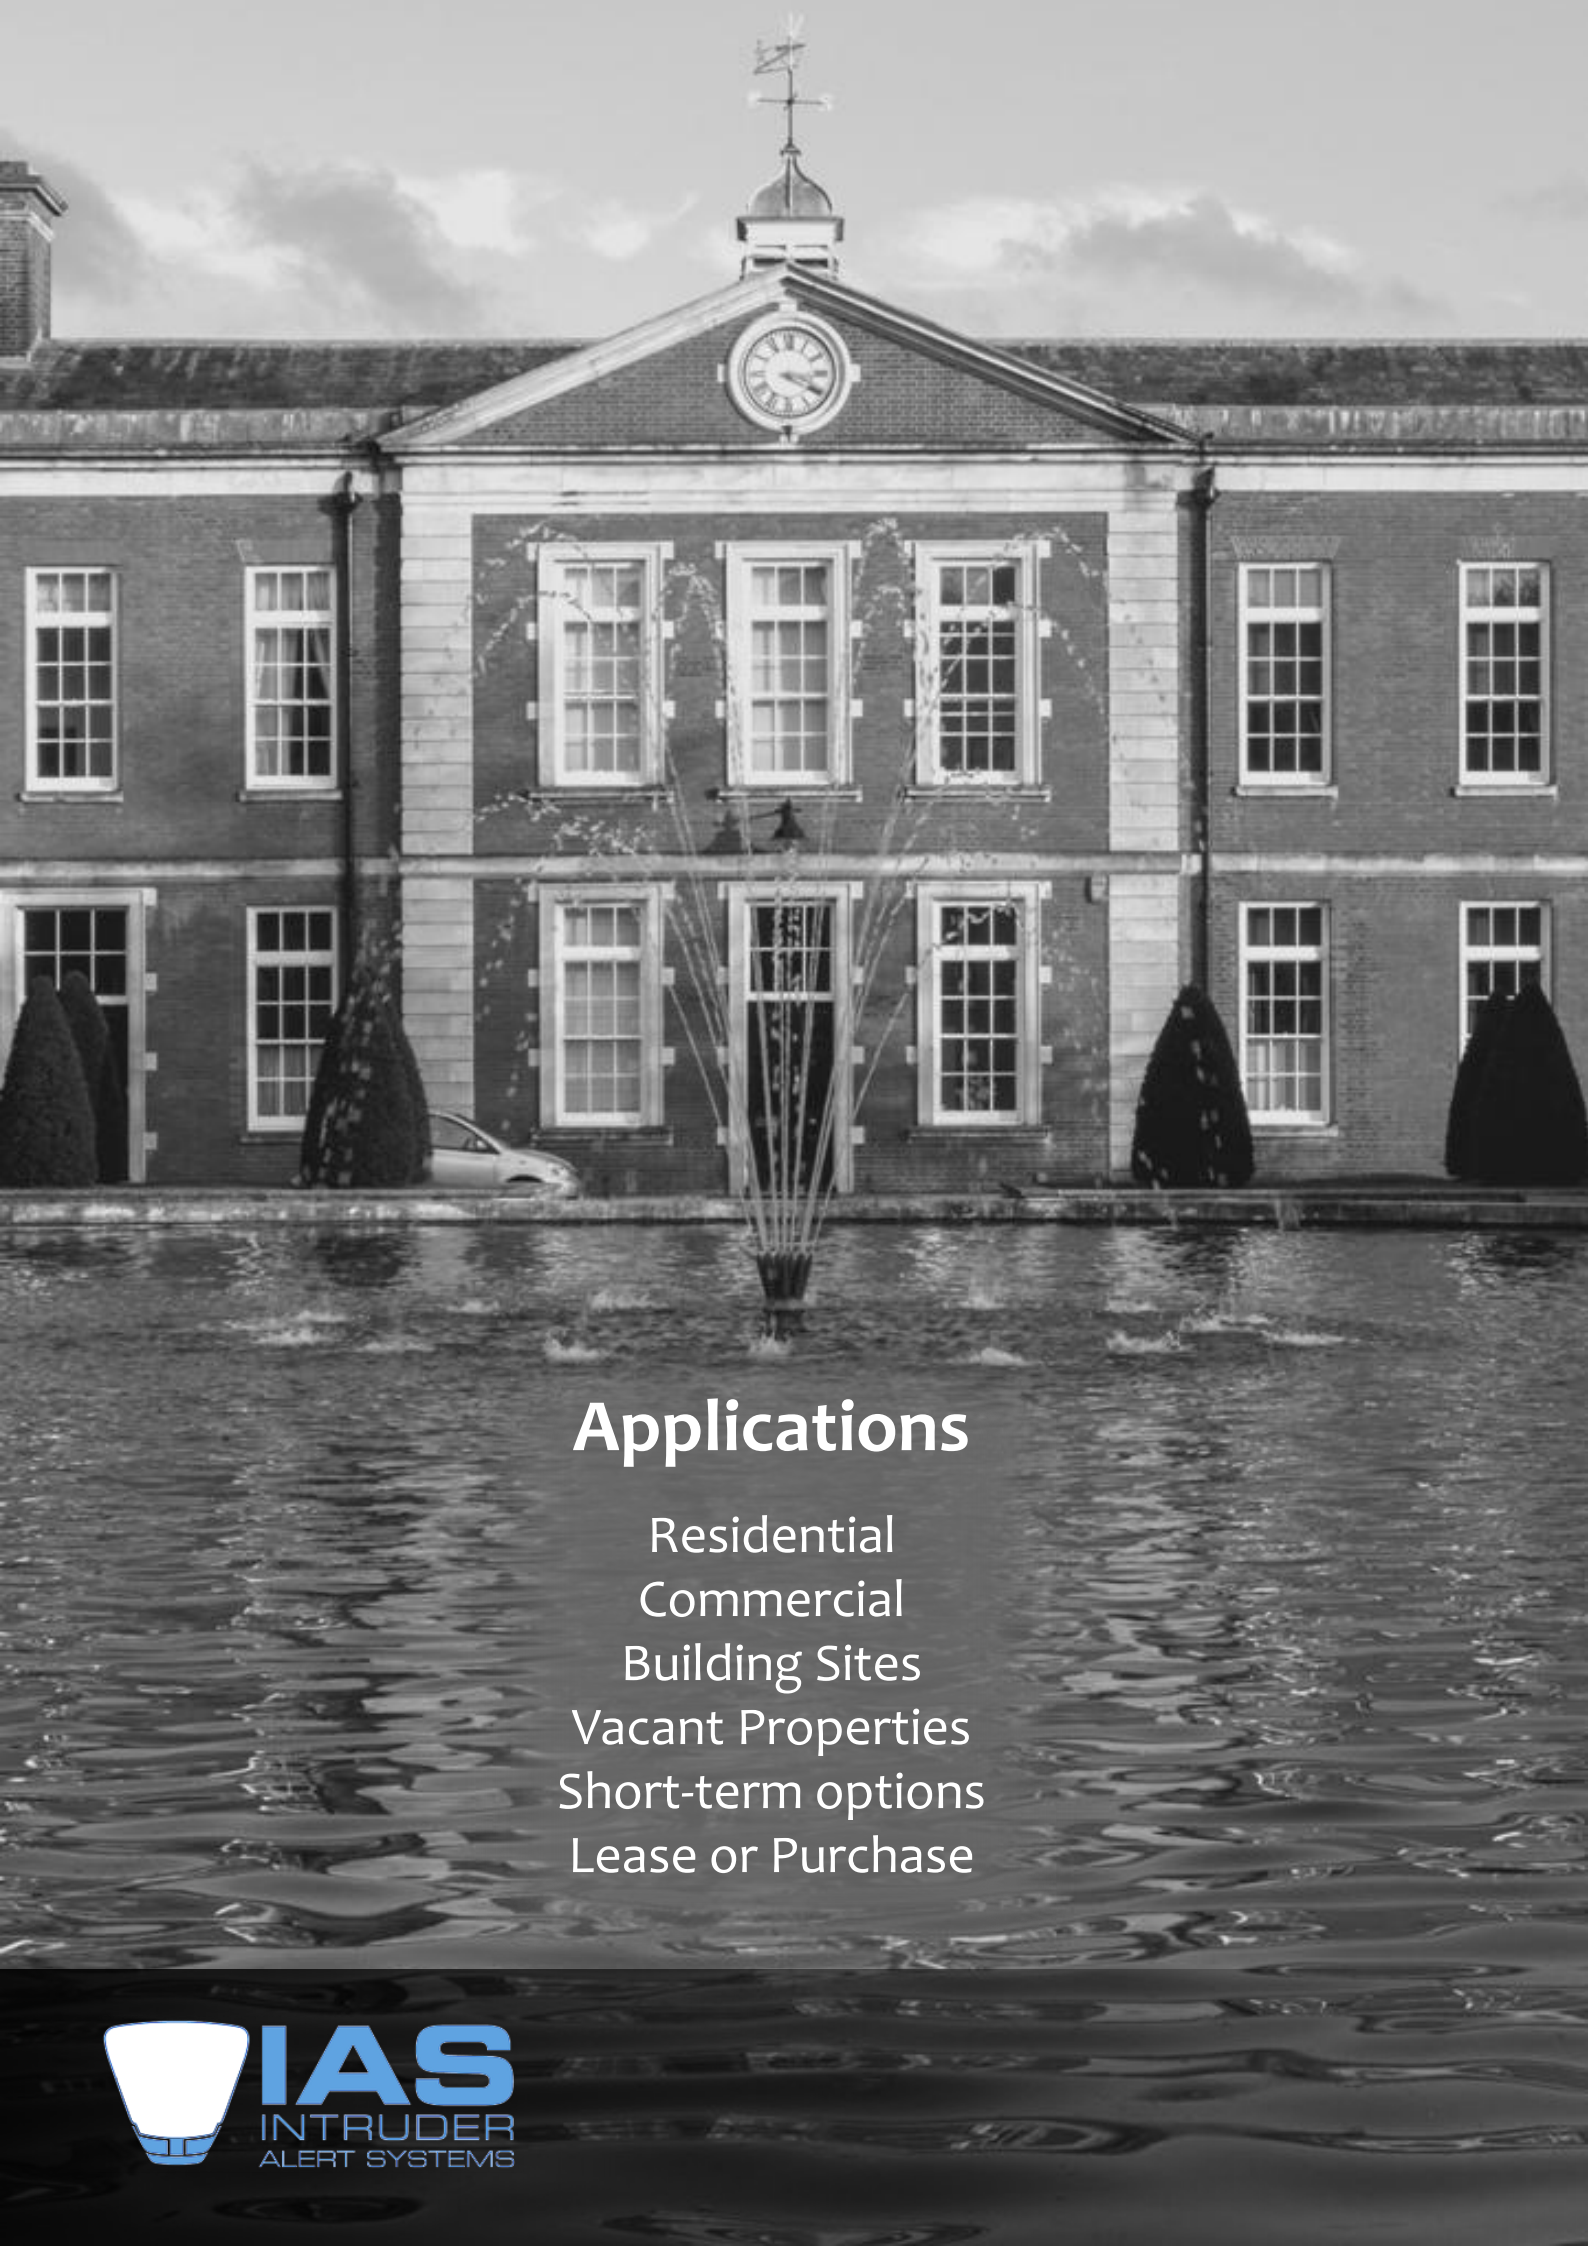

An external motion camera system with remote video connection to our designated monitoring service

Remote CCTV monitoring at a fraction of the cost

-  Once activated, our system sends a 10 second video clip to our 24/7 monitoring centre
-  Our operator assesses the video clip
-  Once a confirmed sighting of activity is seen on site, a call is passed to the nominated contact

Applications

Residential
Commercial
Building Sites
Vacant Properties
Short-term options
Lease or Purchase

How it works

-  The product secures residential, commercial and difficult outdoor applications such as construction sites and critical infrastructure.
-  The system integrates cameras, illumination and motion sensors in a single device.
-  We have also developed a full compliment of accessories including smoke detectors, sirens, arming devices and sensors that work together seamlessly as a complete security solution.
-  Our system transmits over the cellular network.
-  All system components are self-powered and operate on batteries, allowing for TOTALLY wireless video security – detection, illumination, video capture, transmission; offering a unique solution to the issue of false alarms and unnecessary callouts through video verification.
-  The whole system can be completely installed within one day.
